EDUCATION

TKM College Of Engineering ,Kollam

2024 - Present

- BTech in Computer Science
- CGPA : 9.65/10
- Expected Graduation :2028

Chavara Public School , Kottayam

2023-2024

- Higher Secondary
- Percentage : 93.4

TECHNICAL SKILLS

- Programming Languages: C , Python, SQL, Java
- Web Technologies: HTML, CSS
- Web Development: Firebase (Hosting & Database)
- Platforms: VS Code, Render
- APIs & Tools: Gemini API
- Version Control: Git, GitHub

SOFT SKILLS

- Critical Thinking
- Teamwork
- Time Management
- Leadership
- Effective Communication
- Problem Solving

PROFILE

Motivated and self-driven Computer Science student with a strong interest in artificial intelligence and its real-world applications. Experienced in building functional web platforms and AI-integrated tools through hackathons and academic projects. Passionate about using technology to create accessible, community-focused solutions while continuously learning and exploring new domains in software development.

PROJECTS

ROUTIFY — SMART JOURNEY & EVENT PLANNER

IEDC Hackathon Project-First Prize

- Developed a web app enabling users to plan trips, manage events with friends, and find optimized routes.
- Implemented a journey planning chatbot using GPT-4o for personalized travel suggestions and essential item reminders.
- Integrated real-time route matching and live location sharing with Google Maps API.
- Designed a user-friendly dashboard with friend circle, event join/creation flow, and trip wrap-up feature

UMEED - REFUGEE SUPPORT & REINTEGRATION PLATFORM

Google Solution Challenge 2025

- Developed a web platform to assist refugees with access to food, medical aid, legal/job info, and emotional support.
- Took the lead in designing and integrating an AI-powered chatbot using the Gemini API, tailored to provide refugees with instant support on shelter, food, legal aid, and more.
- Independently managed and implemented Firebase for both hosting and database, enabling real-time interaction and scalable deployment.
- Worked collaboratively in a remote team, contributing to both technical implementation and solution design.

FOOD DELIVERY TIME PREDICTOR

Machine Learning Mini Project

- A predictive web application that estimates food delivery time using historical data and real-life delivery conditions such as traffic, weather, and preparation time.
- Worked on model training, backend integration using Flask, and frontend form design to display prediction results.

LANGUAGES

- English (Fluent)
- Malayalam(Fluent)
